

Curtain Side Van Body

You need flexibility in loading and unloading, with the strength and durability of a dry van. That's why we build our curtain side van bodies with the finest PVC coated heavy-duty polyester curtains, add reinforcements at key wear points, provide ratchet curtain tensioners for ease of operation, use stainless steel door frames that maintain their finish, and give you tough laminated hardwood ply-decking that will last.

Whether it's our consistent high quality at a reasonable price, or our commitment to green manufacturing, we do things the right way. Our attention to detail and quality craftsmanship are second to none. Summit isn't the biggest, just the best.
